

HITENDRA S

Software Engineer

☎ +91-9590983034 ✉ shitendra777@gmail.com 🔗 linkedin.com/in/hitendra-s 🌐 hitenn.netlify.app

Summary

Aspiring Software Engineer with hands-on experience building AI-powered applications, RAG pipelines, backend systems, and real-time web applications. Proficient in Python, Node.js, FastAPI, and Next.js, with experience in LLM integrations, vector databases, REST APIs, and Web Sockets. Strong foundation in Data Structures & Algorithms and core Computer Science, seeking Software Engineering and Backend roles.

Education

Bachelor of Engineering in Computer Science and Engineering

2024 – 2027

CMR Institute of Technology, Bengaluru

CGPA: 8.46/10.0

Diploma in Computer Science and Engineering

2021 – 2024

MEI Polytechnic, Bengaluru

CGPA: 9.17/10.0

Experience

Cyber Security Intern

January 2024 – April 2024

Razz Security Academy (On-Site)

Technical Blog (Medium)

- Conducted vulnerability assessments and penetration tests on authorized lab environments, identifying critical CVEs using Nmap, WPScan, Metasploit, and Linux exploitation tools.
- Executed full attack-chain simulations — including reconnaissance, service enumeration, web application exploitation, and privilege escalation — and authored structured security findings reports following OWASP documentation standards.

Skills

Languages: Python, Java, SQL, C

Frameworks & Libraries: Node.js, Express.js, React.js, Next.js, FastAPI, Socket.IO, REST APIs, React Native

Databases & Cloud: PostgreSQL, MongoDB, Supabase, Vercel, Render

Tools: Git, GitHub, Postman

Core CS: Data Structures & Algorithms, OOP, Operating Systems, DBMS, Computer Networks, System Design

Projects

MediBot – Next-Generation Medical RAG Architecture | *Python, FastAPI, Pinecone, Hugging Face, Gemini API*

- Architected an advanced Medical RAG system for querying clinical PDF documents using multi-stage retrieval and context-grounded LLM response generation.
- Developed an automated ingestion pipeline with zero-shot document classification, PII removal, token-based chunking, vector embedding generation, and hybrid retrieval using Bi-Encoder semantic search with Cross-Encoder reranking.

AI-Powered QA Test Case Generation System | *Python, FastAPI, SQLite, Google Gemini, Git*

- Engineered an AI-powered backend platform to ingest structured Markdown documentation, build a hierarchical document tree, and automatically generate QA test cases using Google Gemini.
- Designed a version-aware document comparison engine using SHA-256 content hashing and developed RESTful FastAPI APIs for document ingestion, version management, and structured JSON test case generation.

Sketch.io – Real-Time Collaborative Whiteboard | *Node.js, Express, React, WebSockets, HTML5 Canvas*

- Engineered a low-latency collaborative whiteboard using Node.js, Express, and native WebSockets to synchronize drawing strokes, cursor positions, and active users across multiple clients in real time.
- Implemented coordinate normalization, heartbeat (ping/pong) monitoring, automatic client reconnection, and temporary room persistence to ensure reliable collaboration across different devices and network conditions.

Achievements

- **National-Level Social Hackathon (2026):** Awarded Consolation Prize as part of Team Bigforge for developing an AI-powered Smart Farming and Supply Transparency solution addressing real-world agricultural challenges.
- **Smart India Hackathon (2025) – Team Leader:** Led a team in developing a blockchain-based agricultural solution and advanced through the college-level selection round.
- **Runner-up – DSA Hackathon, CMRIT (2025):** Secured Runner-up position in a college-level algorithmic programming competition by solving DSA challenges under time constraints.
